

CLAIMS

What is claimed is:

1. A collapsible, hand-operated hauling device for hauling items, comprising:
a bed, structured for supporting transportable items, comprising two or more sections
that are joined together in a manner enabling the sections to be folded together
in a collapsed state of said hauling device;
at least one handle secured to said bed in a manner enabling said at least one handle
to be folded together with said bed into a collapsed state; and
a wheel assembly secured to said bed at a position generally opposite said at least one
handle.

2. The collapsible, hand-operated hauling device of claim 1 further
comprising at least one auxiliary handle positioned for lifting said bed when in a
collapsed state.

3. The collapsible, hand-operated hauling device of claim 1 further
comprising a locking device positioned for securing said at least one handle into a first
position for using said hauling device to haul.

4. The collapsible, hand-operated hauling device of claim 3 wherein said
locking device is further structured and positioned to secure said at least one handle in
position proximate said bed when in a collapsed state.

5. The collapsible, hand-operated hauling device of claim 1 further comprising a frame surrounding said bed.

6. The collapsible, hand-operated hauling device of claim 5 further comprising at least one auxiliary handle positioned along said frame for lifting said hauling device.

7. The collapsible, hand-operated hauling device of claim 1 further comprising at least one positioning mechanism positioned to contact adjoining sections of said bed to securely position said adjoining sections of said bed in a non-collapsed state.

8. The collapsible, hand-operated hauling device of claim 7 wherein said bed is comprised of two sections which are pivotally joined together.

9. The collapsible, hand-operated hauling device of claim 8 wherein said at least one handle is pivotally connected to said bed.

10. A collapsible, hand-operated hauling device, comprising:
a bed for receiving transportable items thereon, said bed being further comprised of two sections pivotally joined together and being movable from a first collapsed position to a second non-collapsed position;
a handle assembly pivotally connected to one of said two sections;

a locking mechanism positioned between said handle assembly and said one of two bed sections to lock said handle assembly into said second non-collapsed position;

a handle positioning mechanism for positioning said handle assembly in said second non-collapsed position; and

a wheel assembly having at least one wheel, said wheel assembly being secured to the other of said two bed sections.

11. The collapsible, hand-operated hauling device of claim 10 further comprising a bed frame surrounding at least a portion of said bed for stabilizing said bed.

12. The collapsible, hand-operated hauling device of claim 10 further comprising at least one auxiliary handle connected to at least one of said two bed sections and positioned to provide means for lifting said hauling device in said first collapsed position.

13. The collapsible, hand-operated hauling device of claim 12 wherein said at least one auxiliary handle is a handle connected to one of said two bed sections positioned in opposite and spaced orientation to said wheel assembly.

14. The collapsible, hand-operated hauling device of claim 10 wherein said locking mechanism is further structured and positioned to retain said handle assembly

in said first collapsed state adjacent said bed.

15. The collapsible, hand-operated hauling device of claim 10 wherein said handle assembly further comprises a right handle and a left handle connected to right handle such that said right handle and left handle pivot in tandem relative to said bed.

16. The collapsible, hand-operated hauling device of claim 15 further comprising a bed frame peripherally surrounding at least a portion of said bed.

17. The collapsible, hand-operated hauling device of claim 16 further comprising at least one auxiliary handle positioned for lifting said bed in a first collapsed position.

18. The collapsible, hand-operated hauling device of claim 17 further comprising a fender positioned between said bed and said wheel of said wheel assembly.

19. The collapsible, hand-operated hauling device of claim 17 further comprising a locking mechanism positioned to engage and releasably secure said two bed sections together in said first collapsed position.

20. The collapsible, hand-operated hauling device of claim 19 further comprising a locking device positioned to releasably attach said handle assembly to at least one of said two bed sections in said first collapsed position.
